

# IDEAS

① Heatmap

② Line chart

③ Stacked Area Chart ④ Chord Diagram

⑤ Sankey Diagram

⑥ Pie Chart  
DAY VS. NIGHT

⑦ Scatter Plot

⑧ Bubble Chart

⑨ Treemap  
Affected Areas  
by Forest Type

⑩ Bar Chart

## FILTER

④ ⑤ → Data is not quite suited for chord + Sankey diagram.  
→ complex and limited flow representation

⑦ ⑧ → Lack of geospatial content  
Difficulty in showing temporal trends.

⑨ → Not very informative / Irrelevant.

## CATEGORISE

①, ② + ⑥, ③ + ⑩

## COMBINE + REFINE

→ ① Geographical heatmap can be used as a central visualisation to represent geographical distribution of fire intensity.

→ ② + ⑥ Line and pie chart provides a dual perspective showing temporal progression and proportion of day vs. night.

→ ③ + ⑩ stacked area chart can be turned into a stacked bar chart instead. Showing Forest area burnt by region

## QUESTION

- Should I prioritise showing the geographical spread of fires, temporal progression or relationship between variables?
- Can I combine more different visualisation types to present the data more effectively?

# LAYOUT

## BUSHFIRE INTENSITY HEATMAP

Fire Intensity

Title: FIT3179- Data  
Visualisation II

Author: Joanna May

Date: 10/4/2024

Sheet: 2

Task: Rheographical  
Heatmap

## OPERATIONS

- Circle size represents magnitude of the fire
- Colour scale ranges from light red to dark red
- Hovering over a circle displays information about the fire incident, FRP and date
- Drop down menu provides a closer view and isolates selected states affected

## FOCUS

Dropdown menu filter  
of states

Select Region

VIC	<input checked="" type="checkbox"/>
NSW	<input type="checkbox"/>
ACT	<input type="checkbox"/>

## DISCUSSION

### Advantages

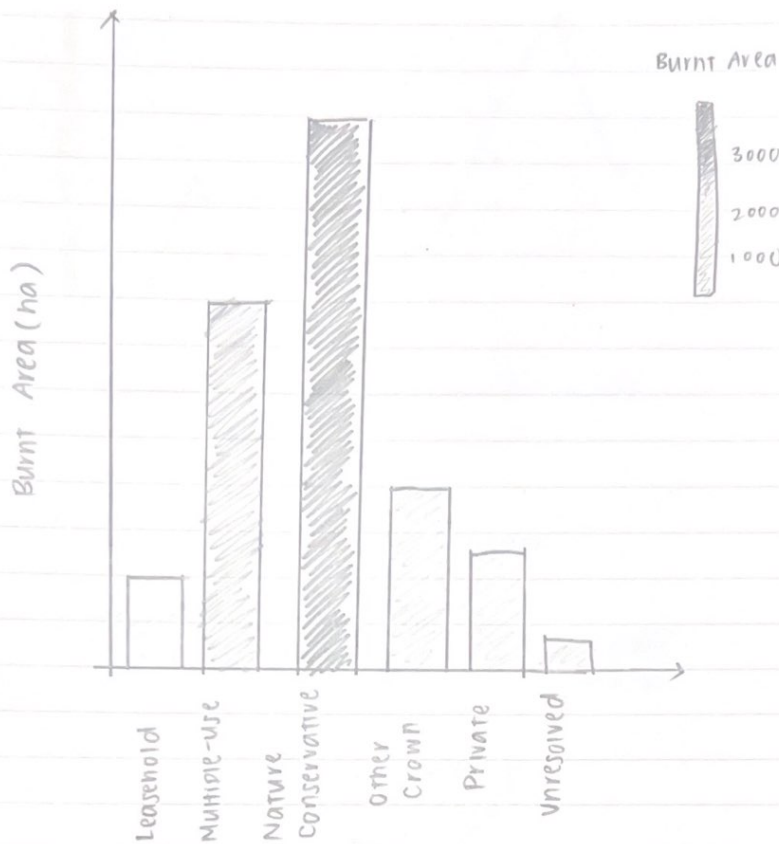

- ✓ Effectively shows geographical spread of fire intensity
- ✓ simple and quick understanding of dataset

### Disadvantages

- ✗ Rendering might be an issue

# LAYOUT

Forest Area Burnt by Forest Tenure

Title: FIT3179 - Data Visualisation II

Author: Joanna Moy

Date: 10/04/2024

Sheet: 3

Task: Bar Chart

## OPERATIONS

- Users can hover over a bar to view additional information
- The chart includes filters that dynamically updates the data shown
- Dropdown menu filters by Region (states)
- Bars are colour coded in a gradient to signify the intensity of the fire

## FOCUS

## DISCUSSION

### Advantages

- ✓ Easy to compare total area burnt across different regions / forest types

### Disadvantages

- X Limited to simple comparisons
- X Less dynamic

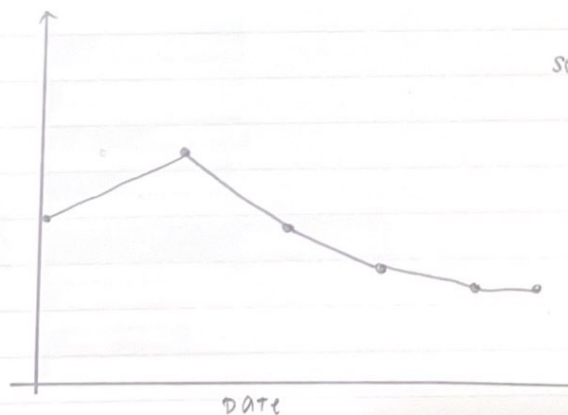

# LAYOUT

Day Vs Night Detection

## FOCUS

Filters chart by  
Day or Night

select Day or Night

Title: FIT3179- Data  
Visualisation II

Author: Joanna May

Date: 10/04/2024

Sheet: 4

Task: Fire Incidents  
Distribution

## OPERATIONS

- Users can hover over individual data points to get detailed information from the tooltip.
- The line chart includes a date range filter, allowing users to focus on specific time periods for a more detailed view
- Data points on line chart can also be categorised as Day or Night incidents.

## DISCUSSION

### Advantages:

- ✓ Straightforward visualisation
- ✓ Quick proportional comparisons.

### Disadvantages:

- ✗ Limited to few categories
- ✗ No time dimension for pie chart

# LAYOUT

Burnt Forest Area vs. Total Forest Area

Title: FIT3179-Data  
Visualisation II  
Author: Joanna Moy  
Date: 10/4/2024  
Sheet: 5  
Task: Stacked bar  
Chart

## OPERATIONS

- Chart uses color-coded segments to differentiate between the area and proportions burnt.
- Users can hover over each segment of the bar to see detailed information
- The chart include filters of different forest types.

## FOCUS

Select Forest Type

NATIVE	✓
Commercial	
Other	

↑  
dropdown menu filter  
for forest types

## DISCUSSION

### Advantages

- ✓ Clear comparison
- ✓ Visualises proportions and totals

### Disadvantages

- x color coding may be ineffective and confusing.
